AEROCHECK2 - SINGLE FREQUENCY

AEROCHECK+ - DUAL FREQUENCY

- Advanced features including Conductivity & Auto-mix, Loop, Guides and Trace
- Large, crisp, daylight readable display
- User friendly interface and ergonomic lightweight design
- Rotary capabilities as standard
- Industry standard probe connectors
- Eight hour battery life
- Rapid 2.5 Hour charging time
- Two-year warranty

The AEROCHECK Flaw Detector offers the very best in Eddy Current performance with rotary inspection capabilities as standard.

INDUSTRY STANDARD PROBE CONNECTORS

The AEROCHECK series uses a wide range of eddy current probes meeting all the needs of the aerospace eddy current inspector. Absolute, Bridge and Reflection connected probes can use the industry standard 12 Way LEMO Connector. A LEMO 00 Connector is also provided for simpler connection of Absolute probes.

WIDE FREQUENCY RANGE

The single frequency AEROCHECK2 has a frequency range of 10Hz to 20MHz, whereas the dual frequency AEROCHECK+ offers 10Hz -12.8MHz, ensuring a diverse range of real world applications can be met.

Area of Inspection: Fasteners
Probe: Low Frequency, Slider

Window Frames
Probe: High & Low
Frequency, Rotary

WORKS THE WAY YOU DO!

The AEROCHECK series has the ability to be used in left and right-handed mode; thanks to the “Auto Flip” function. This is especially useful if the operator is inspecting in a restricted area like the Engine Mounts.

Area of Inspection: Engine Mounts
Probe: Surface

Engine Blades & Discs
Probe: High Frequency

Area of Inspection: Wing Surface & Hinges
Probe: High & Low Frequency

LIGHTWEIGHT, RUGGED, “SURE GRIP” & ENHANCED PROTECTION

Weighing just 1.2kg (2.7lbs), housed in a tough aluminium alloy Mg Si 0.5 powder-coated outer case and fitted with rubber feet to aid grip, the AEROCHECK is as stable on a wing of an aircraft as it is on a laboratory bench.

Both Instruments have two integrated moulded “Sure Grip” handles on the rear of the case.

The AEROCHECK series has enhanced durability through a fully-fitted, custom-designed outer “protective boot” and integral hand-strap for even greater strength and easier grip in use.

ROTARY CAPABILITIES AS STANDARD

The AEROCHECK series includes rotary capabilities as standard and can be used with the ETHER Mercury (mini) ARD002, Hocking 33A100 or the Rohmann MR3/SR1 and SR2 Drives (with special adapter cable).

Area of Inspection: Door Access Points & Window Frames

Probe: Rotary

DAYLIGHT READABLE, CLEAR, LARGE, CONFIGURABLE COLOUR SCREEN

The AEROCHECK series has a large 14.5cm (5.7 Inches) LCD Colour Screen of 640 x 480 pixels providing the Operator with excellent signal resolution and presentation and with the choice of configuring their own colour schemes and display types. It is easy to optimise the screen presentation regardless of the light conditions and it is possible to view a choice of up to two Spot, Time-Base, Waterfall or Meter display types.

Not all NDT inspection on aircraft takes place in the comfort of an aircraft hangar so the daylight readable display is easily viewable outdoors.

Area of Inspection: Bulkhead

Probe: Low Frequency

Area of Inspection: Horizontal Stabilisers
Probe: High & Low Frequency

RECORD AND REPLAY

Up to 164 seconds of live data may be recorded in real-time and then played back either on the instrument or on a PC using the desktop application ETHERANALYSER for subsequent analysis and review. The recorded data may be further optimised by adjusting many settings including Phase, Gain, Filters, Display and Spot position.

Area of Inspection: Fuselage
Probe: Surface & Sub-Surface

EASY TO USE MENUS & ICON SYSTEM

The AEROCHECK series menu system is simple and fast to navigate with the ability to add individually selectable soft key menu items to the sidebar as recognisable icons for rapid function access and a "quick-setting menu" for easy set-up, review and adjustment.

With four operator-selectable soft keys and a fifth slot for the last menu function used, Technicians can quickly modify the system with their preferences. Each saved instrument setting can be associated with a unique, single press set of quick access soft keys. There are also two front panel hard keys that can be readily programmed for rapid single press access to frequently used functions.

“The AEROCHECK offers the right mix for features for any Eddy Current application need in an easy-to-use package designed entirely with the end user in mind.”

ALL POSSIBLE APPLICATIONS COVERED!

The AEROCHECK2 and AEROCHECK+ offer maximum flexibility when deciding which features are needed for your application. As well as the hand-held WELDCHECK & AEROCHECK series, the range also includes the VICTOR 2.2D for inline component testing solutions.

The AEROCHECK+ offers all the great features of the AEROCHECK2 and in addition Dual Frequency and Conductivity Measurement.

ADVANCED FEATURES

Instructions, tutorials and procedures for an inspection can be added to the AEROCHECK+ very quickly and the NDT inspector can easily switch between the inspection itself and the "Guides" while performing a live test.

GUIDES FEATURE:

"Guides" allows the user to display a slide show that can be created easily with commonly used desktop software.

Instructions, tutorials

the operator to readily compare the live data with the reference calibration.

TRACE FEATURE:

The trace function allows a reference trace to be stored on the screen and appears along with the live spot. This allows

"LOOP" FEATURE: "Loop" is a convenient way of capturing a short live repetitive signal and then optimising the instrument settings through real time adjustments of the Phase, Gain, Balance, Filters and Display Configuration in order to simplify the task of optimising the parameters.

The "Loop" function is excellent for calibration set up especially for setting the filters for Rotary and Dual Frequency mix.

ADDITIONAL FEATURES AVAILABLE ON THE AEROCHECK+

DUAL FREQUENCY FEATURE: At different frequencies, different signal indications (e.g. lift off and defect) have a different relative phase and amplitude response. By means of Phase Rotation and Gain change of the X Y signal components one of these indications can be manipulated to be almost identical in phase and amplitude as the other and then by subtraction (mixing), the unwanted component is minimised, giving an improved detection of the required signal.

AUTO-MIX FEATURE: A dual frequency mix exploits the phase and sensitivity change between two different types of indication to suppress one and enhance the other.

Auto-mix simplifies the sometimes complex procedure of mixing two different frequency signals and can be achieved on the AEROCHECK+ through a series of easy steps. Once set up, the Auto-mix itself is as simple as pressing one key.

CONDUCTIVITY MEASUREMENT: Many of the Aerospace procedures require that Conductivity Measurement is available on the designated Eddy Current Flaw Detector.

When connecting the Conductivity Probe, the AEROCHECK+ auto-detects the probe and seamlessly switches into conductivity mode. Removal of the probe switches the instrument back to flaw detection mode.

NB: The Conductivity Measurement Option is available through the purchase of the KACON001 KIT.

Both the AEROCHECK2 and AEROCHECK+ are supplied with a standard “Two-Year Manufacturer Warranty”.

This covers all components of the Instruments and only excludes customer damage or misuse.

The “Two-Year Warranty” can be extended to “Five Years” through purchase of “ETHERCover” Extended Warranty Protection.
